Social Responsibility and Sustainability

CHANGE TO RENEWABLES THE ENERGY FOR EVERYONE

Univergy is a Spanish-Japanese company specialising in the **development of solar, wind and green hydrogen projects**. We were founded in 2012 and since the beginning we have experienced strong growth.

We have a strong international presence focused on the safest and most attractive geographies for renewable energies. Our reference markets are in **Europe, Asia-Pacific and Latin America**.

We are currently advancing downstream integration of the value chain (EPC and Operation).

For the development of certain **projects in Europe and Japan**, we have a strategic alliance with the global investment fund Macquarie Group, which is materialised in two joint ventures (Hinode Energy, in the Japanese market, and Nara Solar, in the European market, both owned 50%).

OUR COMMITMENT TO SUSTAINABILITY

Our commitment to **social responsibility** is consciously based on Univergy Solar's corporate philosophy focused on sustainable development. Both the company group and its management team have been working for more than 20 years with the certainty of **improving the quality of the planet** day by day.

We are convinced that sustainable economic activity is only possible if we see ourselves as an **active part of the global society**. We express this commitment in many ways. Our work is an example of this.

Univergy Solar proposes ecological solutions for high consumption products, committed to **caring for the environment**, in a constant search for guarantees that improve the efficiency of recycling and reuse processes.

With its efforts focused on the creation of **sustainable, ecological, safe and efficient products**, the development department proposes intelligent alternatives to reduce the ecological footprint and the environmental impact derived from bad production and consumption habits worldwide.

OUR GOALS

ESG

Univergy Solar has incorporated into its business development process the objective of offering our customers, suppliers and the planet not only an **investment** that is profitable in the long term but also **environmentally and socially responsible**.

The **environmental, social and economic factors** that are part of Univergy Solar's business development process have a lot to do with our corporate social responsibility, based on sustainable development.

INNOVATION AND TECHNOLOGY

At Univergy Solar we stay at the forefront of all technological innovations that help to carry out the development of our projects without increasing the ecological footprint in the world.

INTERNATIONALISATION

In all our international projects we rely on local partners and suppliers. In this way we boost the local economy while developing our international experience around the world.

CONTINUOUS TRAINING

At Univergy Solar, we believe in strengthening human capital and in continuous training for our professionals. For this reason, all our employees develop their skills and expand their knowledge on a daily basis.
